**FOR IMMEDIATE RELEASE**

**Public Notice: Nephi City Streetlight Upgrades**

Nephi City Power is pleased to announce a city-wide upgrade of our street lighting system. Over the coming weeks, crews will be replacing existing High-Pressure Sodium (HPS) streetlights with new, energy-efficient LED fixtures.

**Key Changes and Benefits:**

- **Light Color:** The current dull orange glow of the HPS lights will be replaced with a crisp, white light at a color temperature of 4000K. This change will significantly improve visibility and color rendering at night.
- **Brightness:** While the new LED lights may appear brighter, they provide the same amount of light as the previous HPS fixtures. The perceived increase in brightness is due to the whiter color of the LED light, which provides a more natural and clearer illumination.
- **Energy Efficiency:** The new LED fixtures are approximately 75% more energy-efficient than the old HPS lights. This will result in substantial cost savings for Nephi City Power and, consequently, for our electric rate customers.
- **Cost Savings for Rate Payers:** The funding for this streetlight upgrade has been provided through a grant. Therefore, the cost of the new LED fixtures will not be passed on to Nephi City electric rate payers.
- **Operational Savings:** LED lights are cheaper to operate than the older HPS lights.

**What to Expect:**

- Residents may notice crews working on streetlights throughout the city.
- The change in light color will be noticeable immediately upon installation.
- The city apologizes for any temporary inconvenience during the upgrade process.

Nephi City Power is committed to providing reliable and efficient service to our community. This streetlight upgrade is a significant step towards a more sustainable and well-lit city.
